

Swing Carriage

Swing Carriages - The most load capacity for forklift jibs in both the retracted or extended positions vary from 1935 lbs to as much as 6000 pounds. It's a good suggestion to ask a material handling specialist about the restrictions for your specific application. The load capacity ratings are for the jib itself and not the forklift or even the utmost load that could be lifted safely using a particular forklift. It is very important bear in mind that at any time when whichever attachments like for instance a lift truck jib are connected to the lift truck, the new center of gravity made by the accessory will reduce the overall lift capability of the forklift. There are guidelines accessible that provide details on how to correctly gauge these load limits.

Before using a forklift jib, ensure that it is properly secured to the lift truck utilizing hooks and shackles. Constantly double check to verify that the screw pins are tight. It is essential to also double check that the load calculations have been done correctly. Keep in mind to take into consideration the truth that rated capacities occasionally lessen whenever the boom is in an elevated position, whenever the boom is extended with telehandlers or even every time the mast is slanted frontward.

Vital suggestions whenever using an adjustable jib is to never pull a load using this type of accessory. These types of attachments are just designed for vertical raising. Also, refrain from letting the load move to and fro. Use extreme caution any time a load is carried to be able to avoid tipping over the truck.
